

Genital Multiplex PCR Testing

- | Multiple Pathogens available
- | Bacteria, Protozoa AND Viruses
- | Rapid diagnosis

SydPath is now performing Genital Multiplex PCR for the detection of the following pathogens:

- | Chlamydia trachomatis
- | Lymphogranuloma venereum (LGV)
- | Neisseria gonorrhoeae
- | Trichomonas vaginalis
- | Treponema pallidum
- | Mycoplasma genitalium
- | Mycoplasma hominis
- | Ureaplasma
- | HSV-1
- | HSV-2
- | Streptococcus agalataiae (Group B Strep)
- | Candida spp.

Your patient will still require microscopy culture and sensitivity (MCS).

- | Detection of pathogens not covered in genital multiplex PCR.
- | MCS for bacterial pathogens

How to order?

- | Request 'Genital MCS + Multiplex PCR' on our Pathology Request Form.
- | Both tests are fully Medicare rebatable.
- | Just add 'PCR' to your 'Genital MCS' order next time you are investigating a genital infection.

Sample Required

- | Genital Swabs (LVS,HVS,Cervix, Urethral , Rectal)
- | UTM PCR Swab.
- | Thin Prep.

For further information, please contact the Microbiology Department on (02) 8382-9209.

Order a Multiplex PCR with your Genital MCS, giving you a faster and more accurate diagnosis than Genital MCS alone.
